Buying Greek insurance *agencies and brokers*

An acquisition opportunity with a meaningful market and unresolved target economics

RESEARCH AS OF 15 OCTOBER 2026

Five-year acquisition scenarios · Independent agencies and brokers

The *economic units* behind the acquisition

Premium, revenue and earnings measure different parts of the business.

Premium

The customer pays the insurer for coverage. Placed premium measures distribution scale, not the agency’s income.

Retained revenue

Gross commissions and fees less onward payments to producers or other intermediaries. This is the model’s revenue denominator.

Normalized EBITDA

Earnings before interest, tax, depreciation and amortization, after market replacement owner pay and cash rent. Published accounting EBITDA may need adjustments.

Analysis based on the study and editable acquisition model

Greece wrote approximately *€6.0bn in 2025*

Original monthly-survey release, €bn of premiums

Bars start at zero

Growth was 2.7% in life and 8.3% in non-life, giving 5.6% overall. The later October CSV revises the total from €6.013bn to €6.018bn.

[01] [02]

A focused 5–15-business program *merits diligence*

The evidence supports screening. Actual seller economics determine whether the strategy works.

Market scale

The 2024 distribution survey identifies **€2.09bn** of premiums handled by nonexclusive agents and brokers within its covered segments.

Conditional returns

Illustrative five-year cases produce **16–17% annualized returns**, all equity, without a higher exit multiple. The downside loses money.

Investment decision	Establish durable retained commissions, realistic replacement owner pay and transferable contracts before scaling to 30 businesses.

Three portfolio sizes require *different capital commitments*

EV means enterprise value, the operating business value. Base assumptions in €m.

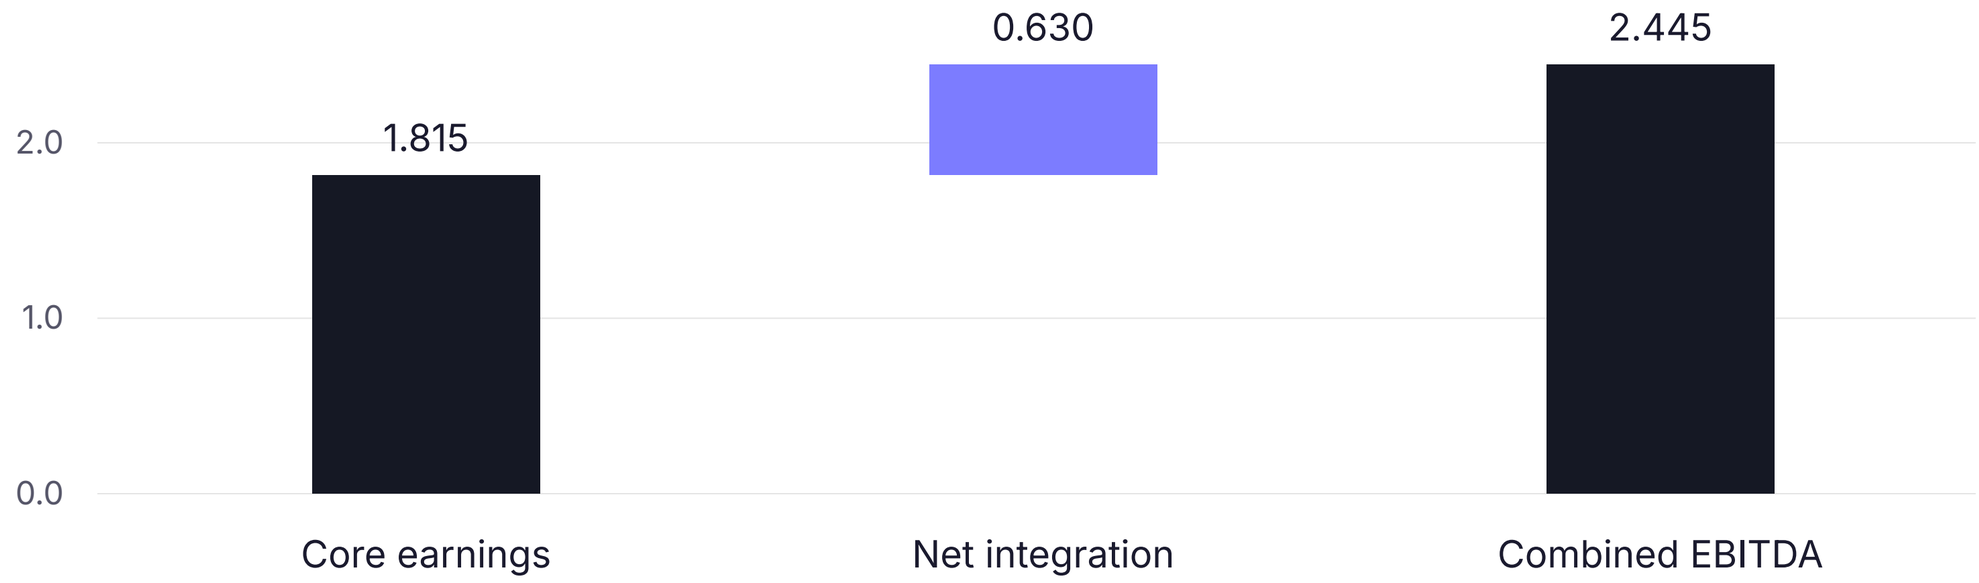

Input	Small	Medium	Large
Businesses	5	15	30
Retained revenue	1.50	7.50	22.50
Starting EBITDA	0.300	1.650	5.625
Normalized margin	20%	22%	25%
Entry EV / EBITDA	6×	7×	8×

Illustrative agency/broker mixes: 4/1, 10/5 and 15/15. Economics are blended because public evidence cannot calibrate separate target distributions.

Analysis based on the study and editable acquisition model

Medium-case integration adds *€0.63m of EBITDA*

Year-five earnings bridge, €m. Compare with the same-year core business.

Net integration adds 34.7% to same-year core EBITDA after central overhead. Organic growth remains within core earnings, so it is excluded from the integration uplift.
