BRAYL / INVESTMENT OPPORTUNITY

Building a Greek insurance distribution group

The market, the acquisition path and the economics for outside investors and the sponsor.

Combined research · 15–16 October 2026
Operating scenarios and sponsor carry · Illustrative underwriting

Evidence through 16 October 2026. This deck combines two studies and adds a clearly labeled five-year scenario extension.

An attractive market needs a disciplined roll-up

The opportunity is to improve distribution economics while preserving the relationships that earn commissions.

A growing market

€6.01bn of 2025 premiums in the EAEE survey, up **5.6%**. Independent agents and brokers handle a meaningful share of business.

A fragmented supply base

19,430 registered intermediaries in the fixed 2024 dataset. The relevant acquisition universe is much smaller and still needs owner-level verification.

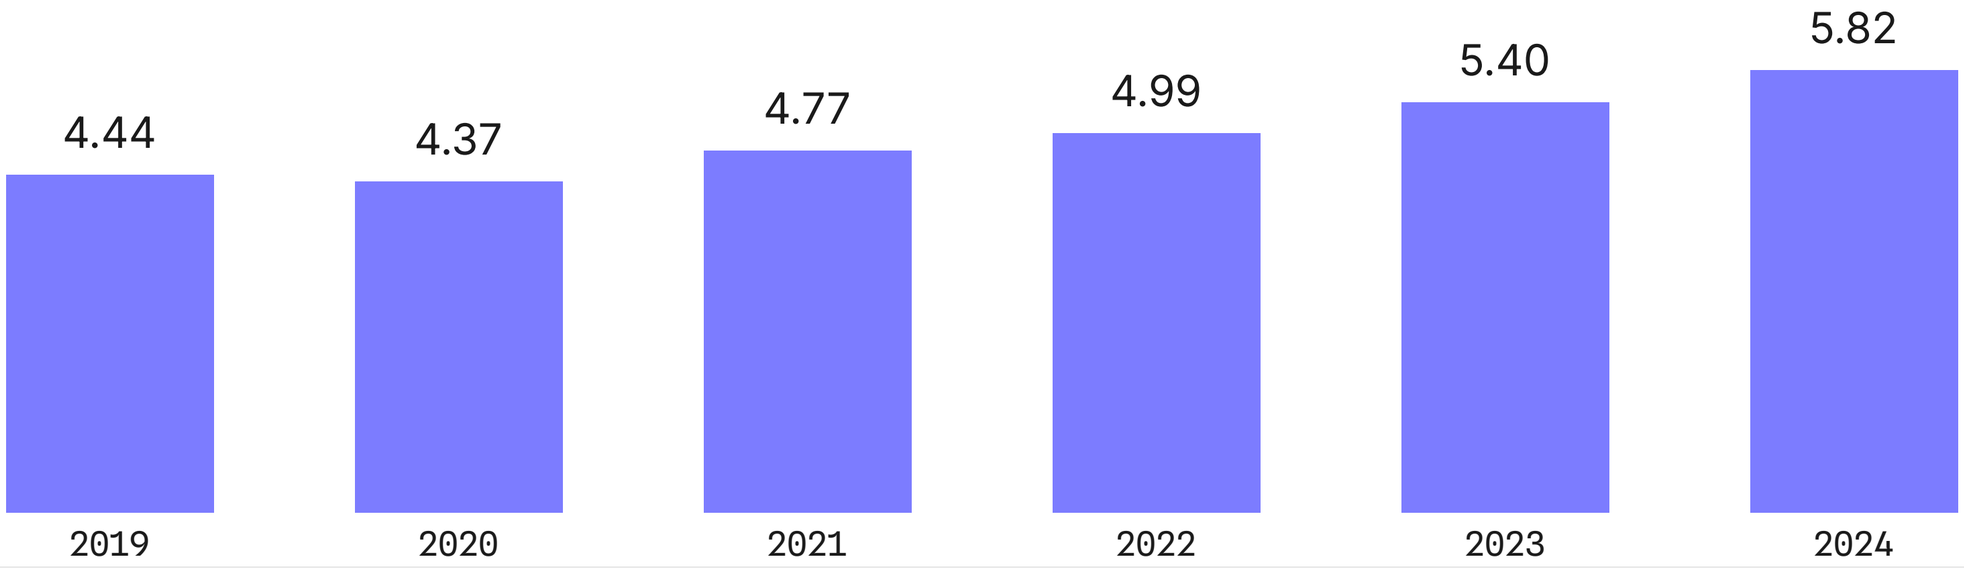

An operating investment

The conservative model produces little net EBITDA uplift. The bull case depends on **retention, shared costs and incremental sales**—not automatic multiple expansion.

S001 · S008

The market grew about 5.6% a year in 2019–24

Annual market estimates, €bn. This is the comparable historical series.

Nominal premium growth can reflect prices, coverage and mix as well as more customers. It is not automatically commission or EBITDA growth.

Two target archetypes anchor the model

Underwriting assumptions after replacement owner pay; these are not observed Greek averages.

Per acquired business	Agency	Broker
Gross annual commission revenue	€400k	€750k
Producer payout / retained revenue	20% / €320k	15% / €637.5k
Replacement owner pay, already included	€60k	€80k
Normalized EBITDA / gross margin	€72k / 18%	€165k / 22%
Purchase price at 6× EBITDA	€432k	€990k
Indicative placed premium at 18% yield	€2.22m	€4.17m

Model assumptions. Debt-free, cash-free purchase; recurring cash rent included. Owner pay is not added again as synergy.

The bull case improves the same acquired businesses

Annual mature EBITDA bridge, €m. Same €6.48m acquisition EV; no organic market growth or exit rerating.

Bridge component	Bull	Meaning
Purchased EBITDA	€1.080m	15 × €72k normalized earnings
Retention loss	−€0.045m	1% one-off permanent revenue loss
Cost savings	+€0.356m	6% of post-churn gross revenue
Sales contribution	+€0.154m	4% added revenue × 65% contribution
Central overhead	−€0.175m	€100k fixed + €5k per agency
Mature EBITDA	€1.371m	26.9% vs purchased EBITDA

Deck extension from the new study. Bull changes retention and operating improvements only; target size, entry EBITDA and price stay fixed.

Capital-call timing materially changes investor returns

Alternative funding timing: monthly capital calls and distributions, instead of all equity paid in year 0.

Portfolio	Base project IRR	Bull project IRR	Bull investor IRR	Bull sponsor carry
5 agencies	-5.8%	4.7%	4.7%	€0.00m
15 agencies	4.8%	13.6%	12.6%	€0.32m
30 agencies	6.9%	15.5%	14.1%	€0.86m
5 brokers	0.3%	8.8%	8.7%	€0.03m
15 brokers	7.3%	14.7%	13.4%	€0.85m
30 brokers	8.6%	16.0%	14.5%	€2.02m

Same assets, operating cash and exit values. Investors fund monthly net cash shortfalls only; positive net cash is distributed monthly. The 8% hurdle accrues monthly at its annual-equivalent rate. This excludes undrawn commitments from invested capital; availability of committed capital still matters.

Deck timing sensitivity. No debt, commitment fees, interest on reserves or assumed sponsor co-investment.
